PROFILE

Final-year engineering student in Computer Science & Data Engineering, I am looking for a **final-year internship (PFE) in Data & AI starting February 2027**, building **AI** systems (machine learning, LLMs, RAG) and the applications that serve them.

PROJECTS

FinSolve AI: enterprise RAG platform with role-based access control (FastAPI, React, LLaMA 3.3, ChromaDB / Qdrant) Oct. 2026

- Context: query a company's documents in natural language while respecting each role's access rights.
- Approach: **RAG** pipeline with an LLM (LLaMA 3.3 70B via Groq), all-MiniLM-L6-v2 embeddings and a vector store (ChromaDB, Qdrant); **document isolation through metadata filtering** by role, JWT authentication, prompt-injection guardrails, and measurement of answer quality (faithfulness, relevancy, context precision).
- Contribution: end-to-end architecture, from the FastAPI backend to the React interface.

xAgriScan: plant disease diagnosis with vision and an LLM (ResNet50, PyTorch, Gemini, Flask, React) June 2026

- Context: help a non-specialist identify a plant disease from a photo.
- Approach: **computer vision** model ResNet50 (PyTorch) paired with an **LLM** (Gemini Flash) that turns the prediction into a usable explanation; model served through a Flask API, React interface with single and batch prediction.
- Contribution: integration of the model, the API and the interface into an end-to-end application.

Emotion and stress detection in text (LinearSVC, BiLSTM, BERT, DistilBERT, Flask, React) May 2026

- Context: detect the emotion and stress level expressed in a text.
- Approach: comparison of **machine learning and deep learning** models, from a linear classifier (LinearSVC) to recurrent networks (BiLSTM) and **transformers** (BERT, DistilBERT); Flask API, React interface and analysis history stored in SQLite.
- Contribution: from model selection to a web application that persists results.

Automatic summarization of Darija texts (AraT5v2, Label Studio, MLflow, Flask, Angular) June 2026

- Context: summarize texts in Darija, a language with few **NLP** resources.
- Approach: data annotation with Label Studio, **fine-tuning** of AraT5v2, experiment tracking with MLflow; model exposed through Flask and an Angular / Node.js application.
- Contribution: built the full chain, from annotation to a model served in an application.

SKILLS

- **AI & machine learning:** PyTorch, TensorFlow/Keras, scikit-learn, LightGBM, BERT / transformers, fine-tuning (HuggingFace), MLflow
- **LLM & RAG:** LLM APIs (Gemini, Groq), RAG, vector databases (ChromaDB, Qdrant), NLP, computer vision
- **Data:** Python (Pandas, NumPy), SQL, PostgreSQL, SQLite, Hadoop (HDFS, MapReduce)
- **Development & tools:** FastAPI, Flask, React, Angular, Node.js, Spring Boot, Git/Linux, Docker (basics)

EXPERIENCE

PFA Intern, MaritimeFlow (OCP Group, Khouribga) Aug. – Sept. 2026

- Vessel trajectory data pipeline and an arrival-time prediction model (LightGBM).

Introductory Internship (OCP Group, Khouribga) July – Aug. 2025

- PostgreSQL schema and a full-stack application (Node.js REST API, React) for KPI tracking.

EDUCATION

ENSA Khouribga, Engineering Degree in Computer Science & Data Engineering (Master's level) 2024 – 2027
ENSA Khouribga, Integrated Preparatory Cycle 2021 – 2024
Baccalaureate in Mathematical Sciences, with honors (mention Bien) (Lycée Sokona Drámara Yangué, Kéniéba, Mali) 2021

LANGUAGES AND CERTIFICATIONS

Languages: French (fluent), English (professional), Bambara (native).
DataCamp (Aug. 2026): Associate Data Analyst, Associate Data Engineer, AI Engineer for Data Scientists Associate.
Anthropic (June 2026): Claude 101, Claude Code 101 (certificates of completion).

EXTRACURRICULAR ACTIVITIES

2nd place, Codex competition (Codex Club, ENSA Khouribga) Dec. 2025
Member of the organizing team, DATAVERSE event (ENSA Khouribga) Dec. 2025
